

# ConForms Ruff-Neck™ 5" to 3" Reducing Hose

## CONTROLLED FLOW... AND LESS SPLATTER!

Con Forms' new 5" to 3" Ruff-Neck™ Reducing Hose has been engineered for enhanced control of concrete flow. The result is easier filling of forms and block, with less splatter. The hose's streamlined shape reduces plugging while delivering a smooth, consistent concrete flow that can make ICF blowouts a thing of the past.

Plus, with the one-piece Ruff-Neck™ Reducing Hose, there's no need for add-ons such as a steel reducer and coupling, Ram's Horn or double 90° elbows. This not only saves cost and set-up time, but also provides a safer alternative to hanging heavy components from the hose.

- **Ideal for ICF, block and form filling applications**
- **Smooth, controlled concrete flow virtually eliminates splatter and boom bounce**
- **Less segregation of concrete**
- **Easy to handle and manipulate**
- **5" to 4.5" reduction in hose body, 4.5" to 3" reduction in hose**
- **Also available for 4.4" boom systems**
- **Meets CPMA Safety Standards**

Patent Pending hose easily fills all form openings

The Ruff-Neck™ Reducing Hose maintains a smooth, controlled flow

One-piece design eliminates need for other components
